

WARNING - AVOID SEVERE AND COSTLY ENGINE DAMAGE

This unit utilizes plastic fuel lines that connect the injector's fuel housing to the metal fuel supply and return hoses. The plastic fuel lines can become brittle over time and may crack when being disturbed while replacing the injection assembly.

If these plastic lines are not replaced with the injector assembly, they can leak after the repair. This can cause engine flooding, oil contamination, engine stall and result in a costly warranty repair or severe engine damage.

In order to prevent leaks and warranties, the hoses and o-rings should be replaced when the injector assembly is being replaced. The lines are included in the "CPI Nut Kit" from AC Delco or your local GM dealer. The AC Delco part number is 17112705. The kit includes the hoses, o-rings, mounting bracket and screw.
